Question 1

Correct

Marked out of 1.00

Flag question

Status	Finished
Started	Sunday, 10 November 2024, 8:15 PM
Completed	Sunday, 10 November 2024, 8:46 PM
Duration	30 mins 10 secs

Java HashSet class implements the Set interface, backed by a hash table which is actually a `HashMap` instance.

No guarantee is made as to the iteration order of the hash sets which means that the class does not guarantee the constant order of elements over time.

This class permits the null element.

The class also offers constant time performance for the basic operations like add, remove, contains, and size assuming the hash function disperses the elements properly among the buckets.

Java HashSet Features

- A few important features of HashSet are mentioned below:
- Implements `Set Interface`.
 - The underlying data structure for HashSet is `Hashtable`.
 - As it implements the Set Interface, duplicate values are not allowed.
 - Objects that you insert in HashSet are not guaranteed to be inserted in the same order. Objects are inserted based on their hash code.
 - NULL elements are allowed in HashSet.
 - HashSet also implements `Serializable` and `Cloneable` interfaces.
 - `public class HashSet<E> extends AbstractSet<E> implements Set<E>, Cloneable, Serializable`
- Sample Input and Output:
- ```
5
90
56
45
78
25
78
Sample Output:
78 was found in the set.
Sample Input and output:
3
2
7
9
5
Sample Input and output:
5 was not found in the set.
```

Answer: (penalty regime: 0 %)

Reset answer

```
1 import java.util.HashSet;
2 import java.util.Scanner;
3
4 public class HashSetExample {
5 public static void main(String[] args) {
6 Scanner scanner = new Scanner(System.in);
7 int n = scanner.nextInt();
8
9 HashSet<Integer> numbers = new HashSet<>();
10 for (int i = 0; i < n; i++) {
11 numbers.add(scanner.nextInt());
12 }
13 int searchKey = scanner.nextInt();
14
15 if (numbers.contains(searchKey)) {
16 System.out.println(searchKey + " was found in the set.");
17 } else {
18 System.out.println(searchKey + " was not found in the set.");
19 }
20
21 scanner.close();
22 }
23 }
24
```

|   | Test | Input                                 | Expected                    | Got                         |   |
|---|------|---------------------------------------|-----------------------------|-----------------------------|---|
| ✓ | 1    | 5<br>90<br>56<br>45<br>78<br>25<br>78 | 78 was found in the set.    | 78 was found in the set.    | ✓ |
| ✓ | 2    | 3<br>-1<br>2<br>4<br>5                | 5 was not found in the set. | 5 was not found in the set. | ✓ |

Passed all tests! ✓

Question 2

Correct

Marked out of 1.00

Flag question

Write a Java program to compare two sets and retain elements that are the same.

Sample Input and Output:

```
5
Football
Hockey
Cricket
Volleyball
Basketball
7 // HashSet 2:
Golf
Cricket
Badminton
Football
Hockey
Volleyball
Handball
SAMPLE OUTPUT:
Football
Hockey
Cricket
Volleyball
Basketball
```

Answer: (penalty regime: 0 %)

```
1: import java.util.HashSet;
2: import java.util.Scanner;
3: public class Main {
4: public static void main(String[] args) {
5: Scanner scanner = new Scanner(System.in);
6: HashSet<String> set1 = new HashSet<>();
7: HashSet<String> set2 = new HashSet<>();
8: int n1 = scanner.nextInt();
9: for (int i=0;i<n1;i++) {
10: set1.add(scanner.next());
11: }
12: int n2 = scanner.nextInt();
13: for (int i=0; i<n2;i++) {
14: set2.add(scanner.next());
15: }
16: set1.retainAll(set2);
17: for (String element:set1) {
18: System.out.println(element);
19: }
20: scanner.close();
21: }
22: }
```

|   | Test | Input                                                                                                                                                | Expected                                                | Got                                                     |   |
|---|------|------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------|---------------------------------------------------------|---|
| ✓ | 1    | 5<br>Football<br>Hockey<br>Cricket<br>Volleyball<br>Basketball<br>7<br>Golf<br>Cricket<br>Badminton<br>Football<br>Hockey<br>Volleyball<br>Throwball | Cricket<br>Hockey<br>Volleyball<br>Football<br>Football | Cricket<br>Hockey<br>Volleyball<br>Football<br>Football | ✓ |
| ✓ | 2    | 4<br>Toy<br>Bus<br>Car<br>Auto<br>3<br>Car<br>Bus<br>Lorry                                                                                           | Bus<br>Car<br>Car                                       | Bus<br>Car<br>Car                                       | ✓ |

Question 3

Correct

Marked out of 1.00

Flag question

Java HashMap Methods

**containsKey()** Indicate if an entry with the specified key exists in the map

**containsValue()** Indicate if an entry with the specified value exists in the map

**putIfAbsent()** Write an entry into the map but only if an entry with the same key does not already exist

**remove()** Remove an entry from the map

**replace()** Write to an entry in the map only if it exists

**size()** Return the number of entries in the map

Your task is to fill the incomplete code to get desired output

Answer: (penalty regime: 0 %)

Reset answer

```
1: import java.util.HashMap;
2: import java.util.Map.Entry;
3: import java.util.Set;
4: import java.util.Scanner;
5:
6: class prog {
7: public static void main(String[] args) {
8: // Creating HashMap with default initial capacity and load factor
9: HashMap<String, Integer> map = new HashMap<String, Integer>();
10:
11: String name;
12: int num;
13: Scanner sc = new Scanner(System.in);
14: int n = sc.nextInt();
15: for (int i = 0; i < n; i++) {
16: name = sc.next();
17: num = sc.nextInt();
18: map.put(name, num);
19: }
20:
21: // Printing key-value pairs
22: Set<Entry<String, Integer>> entrySet = map.entrySet();
23:
24: for (Entry<String, Integer> entry : entrySet) {
25: System.out.println(entry.getKey() + " : " + entry.getValue());
26: }
27: System.out.println("-----");
28:
29: // Creating another HashMap
30: HashMap<String, Integer> anotherMap = new HashMap<String, Integer>();
31:
32: // Inserting key-value pairs to anotherMap using put() method
33: anotherMap.put("SIX", 6);
34: anotherMap.put("SEVEN", 7);
35:
36: // Inserting key-value pairs of map to anotherMap using putAll() method
37: anotherMap.putAll(map);
38:
39: // Printing key-value pairs of anotherMap
40: entrySet = anotherMap.entrySet();
41:
42: for (Entry<String, Integer> entry : entrySet) {
43: System.out.println(entry.getKey() + " : " + entry.getValue());
44: }
45:
46: // Adds key-value pair 'FIVE-5' only if it is not present in map
47: map.putIfAbsent("FIVE", 5);
48:
49: // Retrieving a value associated with key 'TWO'
50: int value = map.get("TWO");
51: System.out.println(value);
52: }
53: }
```
